

# Welcome to the launch of the European COVID-19 Scenario Hub!

Funded by ECDC, an agency of the European Union

With special thanks for the scientific leadership to LSHTM; the support from the US COVID-19 Scenario hub team, and all participating modelling teams!

25 May 2022, 15:30-16:30 CET

# ECDC's COVID-19 Modelling Hubs

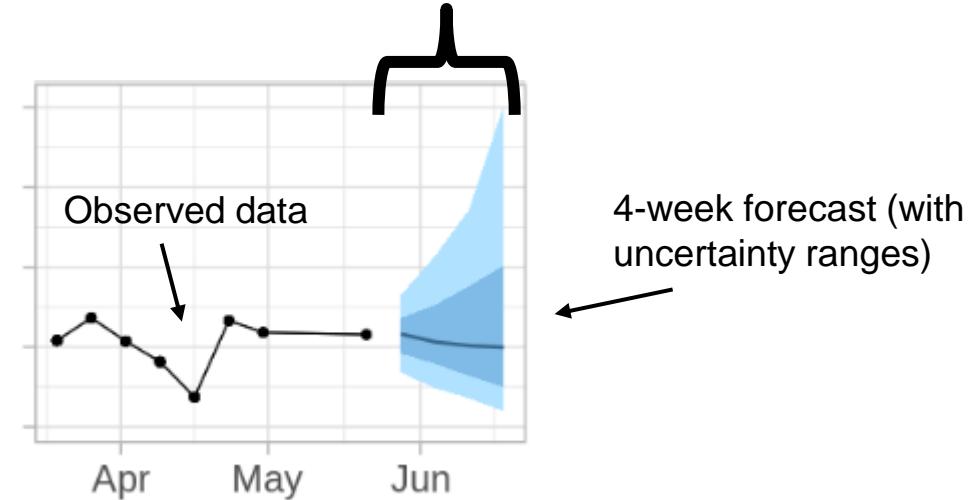

EuropeanCOVID-19  
ForecastHub

<https://covid19forecasthub.eu>

2021:

- **European COVID-19 Forecast hub** with 30+ modelling teams globally forecasting COVID-19 outcomes in Europe to inform policy advice
- Focus on **short-term forecasts over 1-4 weeks**; ensemble forecasts from multiple models performed reliably well!

# ECDC's COVID-19 Modelling Hubs

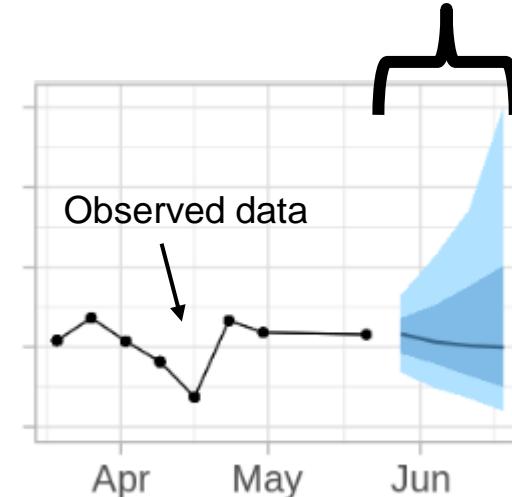

EuropeanCOVID-19  
ForecastHub

<https://covid19forecasthub.eu>

2021:

- European COVID-19 Forecast hub with 30+ modelling teams globally forecasting COVID-19 outcomes in Europe to inform policy advice
- Focus on **short-term forecasts over 1-4 weeks**; ensemble forecasts from multiple models performed reliably well!

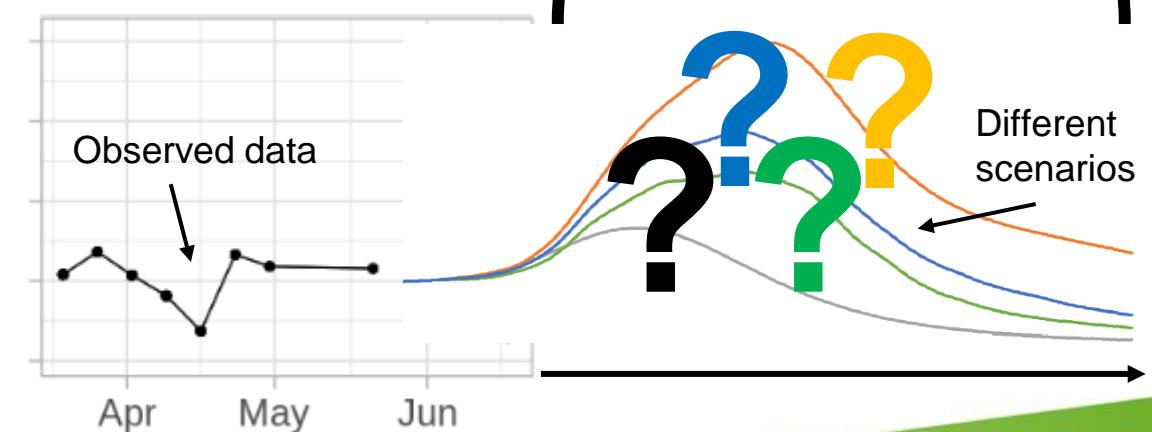

EuropeanCOVID-19  
ScenarioHub

<https://covid19scenariohub.eu>

2022/Today:

- European COVID-19 Scenario hub for **longer-term projections of scenarios over 6-12 months** to explore leading causes of uncertainty about future COVID-19 outcomes

# ECDC's COVID-19 Modelling Hubs

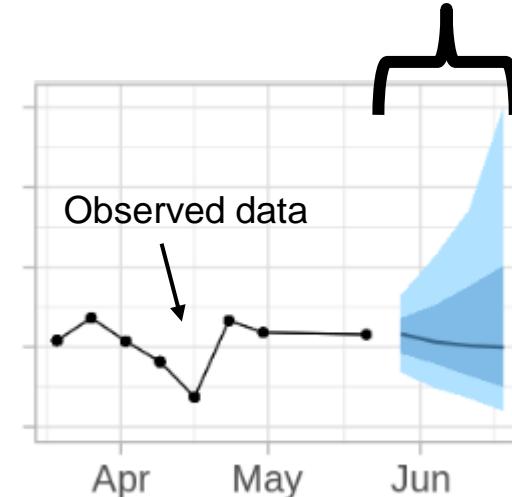

EuropeanCOVID-19  
ForecastHub

<https://covid19forecasthub.eu>

2021:

- European COVID-19 Forecast hub with 30+ modelling teams globally forecasting COVID-19 outcomes in Europe to inform policy advice
- Focus on **short-term forecasts over 1-4 weeks**; ensemble forecasts from multiple models performed reliably well!

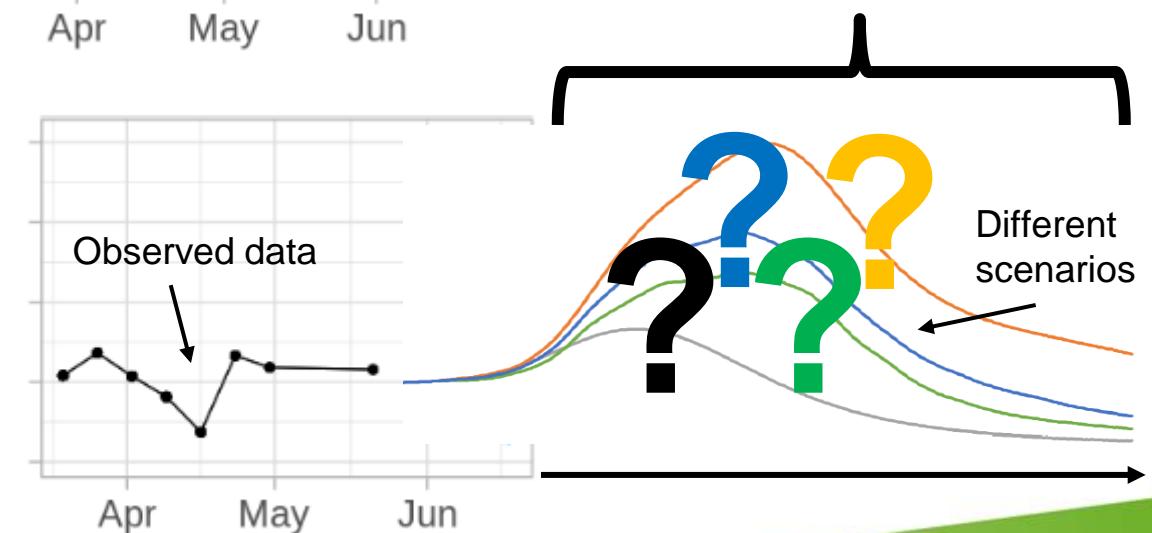

2022/Today:

- European COVID-19 Scenario hub for **longer-term projections of scenarios over 6-12 months** to explore leading causes of uncertainty about future COVID-19 outcomes
- Both hubs have focussed on building a **collaborative community** of modellers

EuropeanCOVID-19  
ScenarioHub

<https://covid19scenariohub.eu>

# Event aims today & agenda

- Highlight the potential of collaborative modelling
- Give context to the new European COVID-19 Scenario Hub
- Reach out to modellers interested in participating

Part	Time	Topic	Speaker
1	15:30	Welcome and introduction	Frank Sandmann (ECDC)
	15:35	European COVID-19 Forecast Hub	Sebastian Funk (LSHTM)
	15:40	US COVID-19 Scenario Modelling Hub	Katriona Shea (Penn State)
	15:50	European COVID-19 Scenario Hub	Katharine Sherratt (LSHTM)
	16:00	Address by the Chief Scientist of ECDC	Mike Catchpole (ECDC)
2	16:05	Q&A	All
	16:10	Technical discussion with modelling teams intending to submit to Round 1	All modellers interested in participating

# Address by the Director of ECDC - Dr Andrea Ammon

*"The launch of the COVID-19 Scenario hub today underlines ECDC's value of using infectious disease modelling for public health decision making to strengthen Europe's health security.*

*As we transition into new phases of the COVID-19 pandemic, the results of this hub will support ECDC's risk analysis, assessment of public health advice, and strategic planning for anticipatory action in the EU/EEA Member States in 2022/2023.*

*This is an exciting initiative to advance scientific collaboration and our understanding of possible future developments of COVID-19.*

*My heartfelt thanks to everyone being here today, and to everyone in the modelling community who has been engaging in ECDC's COVID-19 Forecasting and Scenario hubs."*

& TROPICAL  
MEDICINE

# Forecast hub set up

- started in March 2021
- collates weekly forecasts (4 weeks ahead) of COVID-19 cases, hospitalisations and deaths in 32 European countries from modelling teams worldwide
- 58 unique models  
(currently: 18)  
from 37 teams
- ca. 5 million forecast values (incl. uncertainty)
- Model inputs combined into “ensemble forecast”

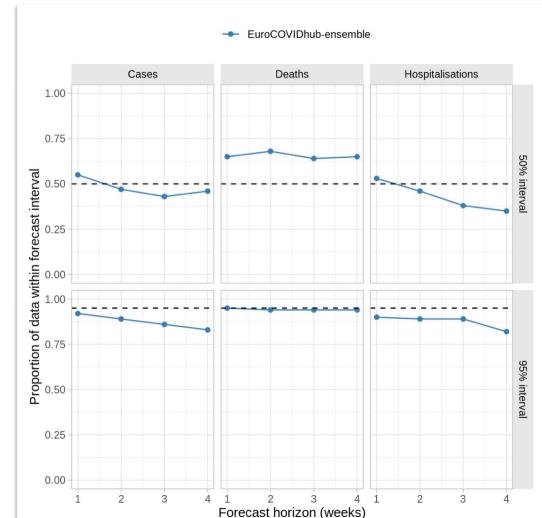

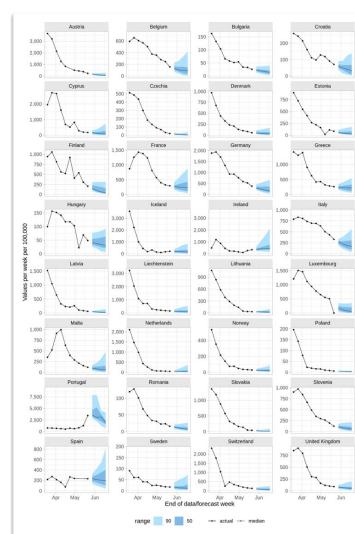

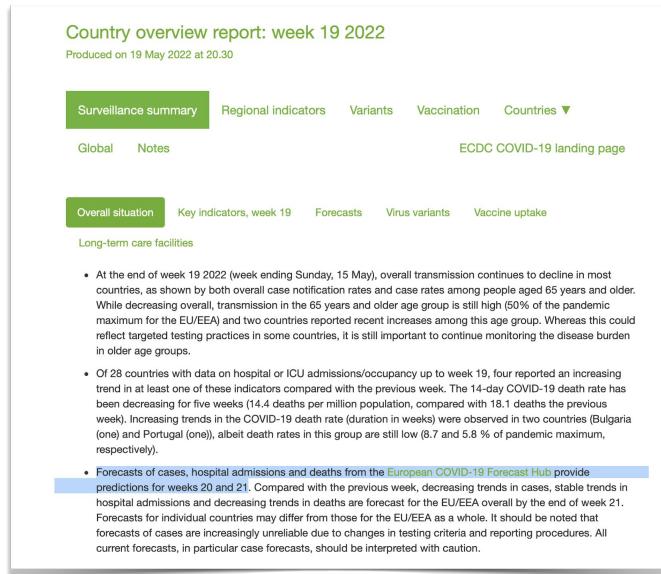

<https://covid19forecasthub.eu>

# Central goals of Forecast Hub

1. Provide decision-makers and general public with reliable information about where the pandemic is headed in the next month.
2. Gain insight into which modelling approaches do well.
3. Assess the reliability of forecasts for different measures of disease severity.
4. Create a community of infectious disease modelers underpinned by an open-science ethos.

# Central goals of Forecast Hub

1. Provide decision-makers and general public with reliable information about where the pandemic is headed in the next month.

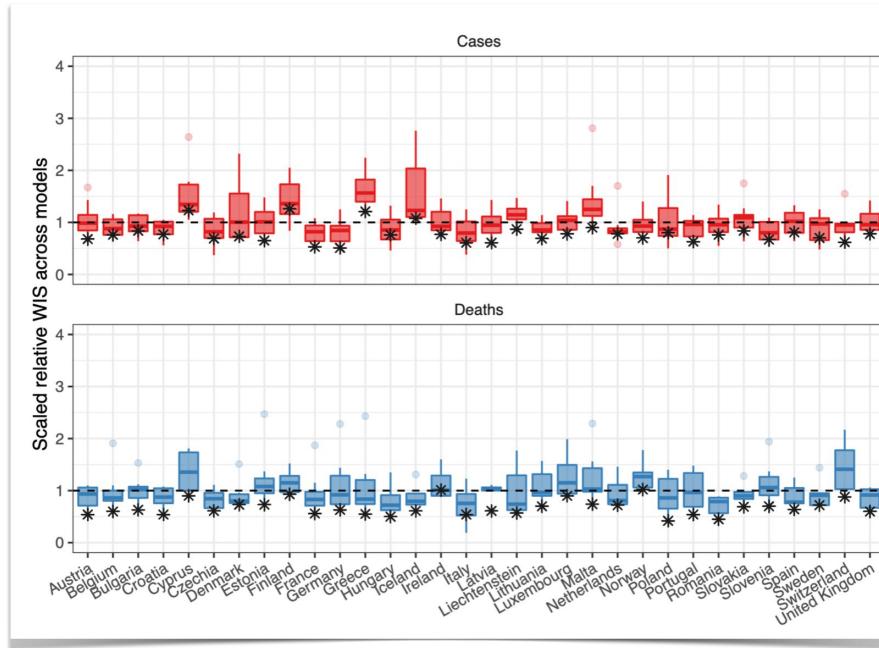

Weekly ECDC surveillance report

Weekly report on forecast performance

# Central goals of Forecast Hub

2. Gain insight into which modelling approaches do well.
  - ensemble outperforms individual models

Predictive performance of multi-model ensemble forecasts of COVID-19 across European nations

# COVID-19 ScenarioModelingHub

**Fourteen model rounds since Dec 2020, open call, 6-10 models projected 4 scenarios per round:**

1. Vaccine supply and non-pharmaceutical interventions [2020-12-22]
2. More transmissible variant (B.1.1.7) and NPIs [2021-01-22]
3. Vaccine supply and NPIs [2021-3-5]
4. Vaccine supply and NPIs [2021-3-28]
5. Vaccine hesitancy and NPIs [2021-5-2]
6. More transmissible variant and vaccine hesitancy [2021-06-08]
7. Delta variant and vaccine hesitancy [2021-07-06]
8. Immune waning and severity of re-infection [2021-08-17, training round]
9. Childhood vaccination and variant of increased transmissibility [2021-09-14]
10. Immune waning and boosters [2021-11-09]
11. Omicron emergency round I
12. Omicron emergency round II
13. Waning and new variant
14. Boosters and new variant

# Round 9: Childhood vaccination

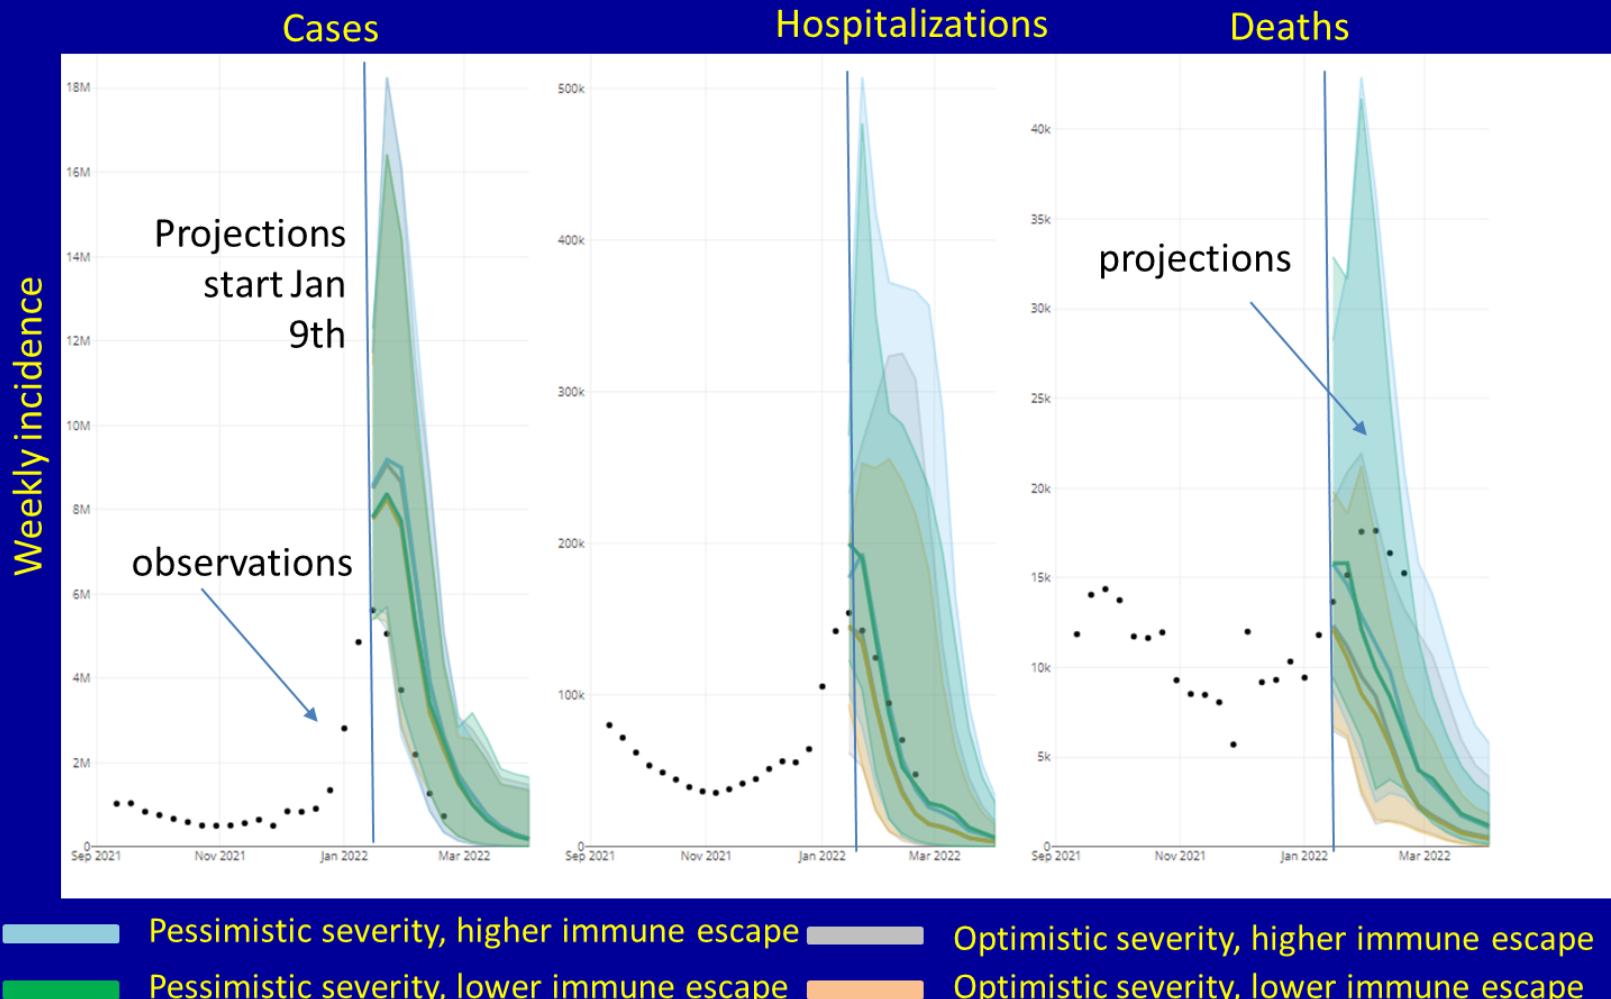

## Sep 12, 2021 – Mar 12, 2022

This information was presented to the CDC's advisory committee (ACIP) as it considered authorization and guidance on vaccinating 5-11 year olds

# 2 Omicron rounds

## Reported on Dec 31, 2021 and Jan 20, 2022

Round 12: 10 teams

# Hub Benefits

Making decisions is challenging for highly uncertain, time-sensitive, consequential situations

- Multiple models help us to deal rapidly with uncertainty
- Careful scenario design allows us to address both uncertainty and decisions
- The ensemble performs consistently better than any individual model
- Aggregated long-term projections provide clear guidance for decision makers

We look forward to learning from the new EU Scenario Modelling Hub!

SCIENCE AND DECISION-MAKING: COVID-19

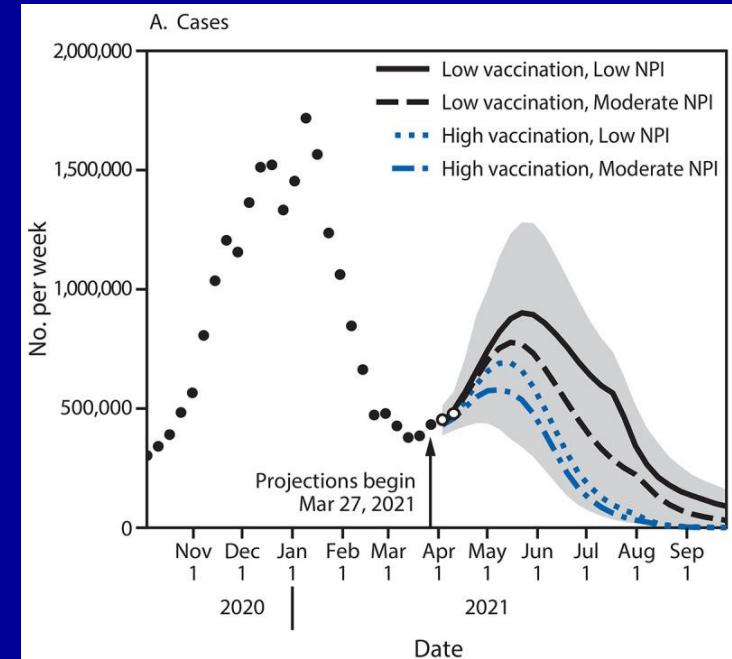

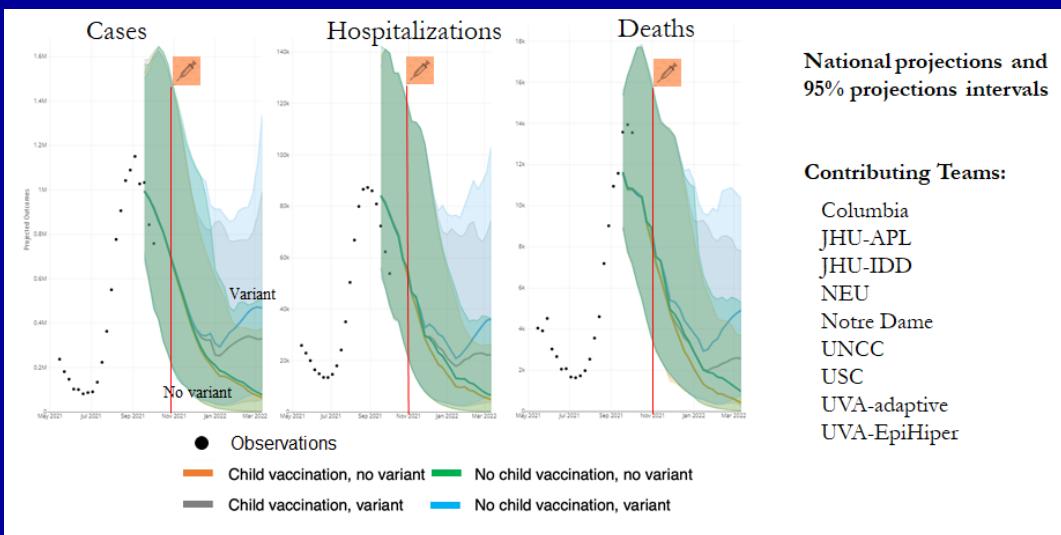

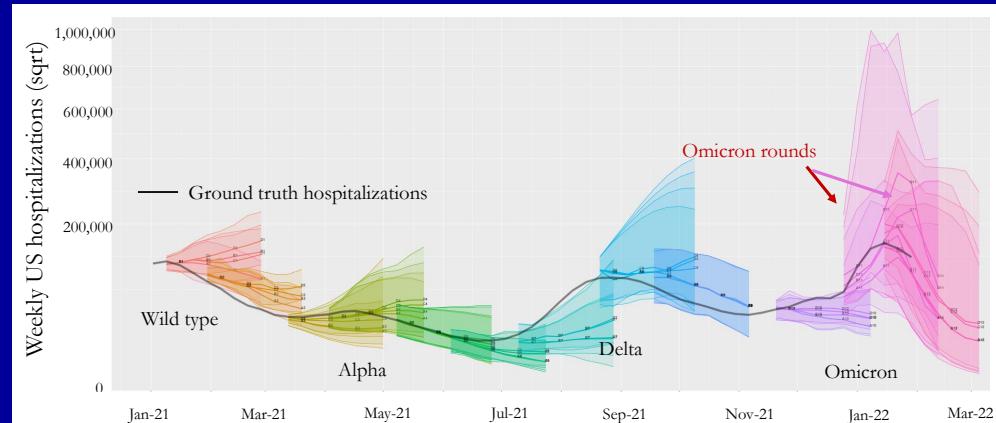

## Harnessing multiple models for outbreak management

Expert elicitation methods and a structured decision-making framework will help account for risk and uncertainty

# The European COVID-19 Scenario Hub

Katharine Sherratt, London School of Hygiene and Tropical Medicine  
with Hugo Gruson, Sebastian Funk (LSHTM), Rene Niehus, Rok Grah, Frank  
Sandmann (ECDC)

# The European COVID-19 Scenario Hub

---

## Aim

To **explore and bound the uncertainty** around future COVID-19 outcomes, for 32 European countries over 3-12 months

## Process

- **Scenarios** isolate **fundamental drivers** of COVID-19 dynamics
- **Models** encode the **influence** of these drivers on COVID-19 outcomes
- **Projections** demonstrate the **relative impact** of different variables, given current knowledge

## Outcomes

- **Policy relevant knowledge:** Scenarios relevant to inform long-term public health planning for COVID-19
  - Output: ECDC policy recommendations
- **Scenario modelling methods:** Insight into how varying modelling approaches relates to variation in outcomes
  - Output: joint-authorship Hub paper
- **Collaborative open science:** Create a community of infectious disease modelers underpinned by an open-science ethos
  - Output: public, accessible data, supported by open source software

# Scenarios: Round 0

## Introduction of a new variant

Immunity to infection

	No new variant	New variant X
Optimistic waning of protection	<ul style="list-style-type: none"><li>• Projections are initialized with the mix of strains circulating at the start of the projection period</li></ul>	<ul style="list-style-type: none"><li>• <i>Introduction:</i> From May 1st 2022 is a <b>continuous influx</b> of 50 weekly infections of variant X over 16 weeks</li><li>• <i>Characteristics:</i> Variant X has <b>30% immune escape</b>, and the <b>same intrinsic transmissibility and severity</b> as Omicron.</li></ul>
Pessimistic waning of protection	Scenario A	Scenario B
	Scenario C	Scenario D

# Scenarios: Round 1

---

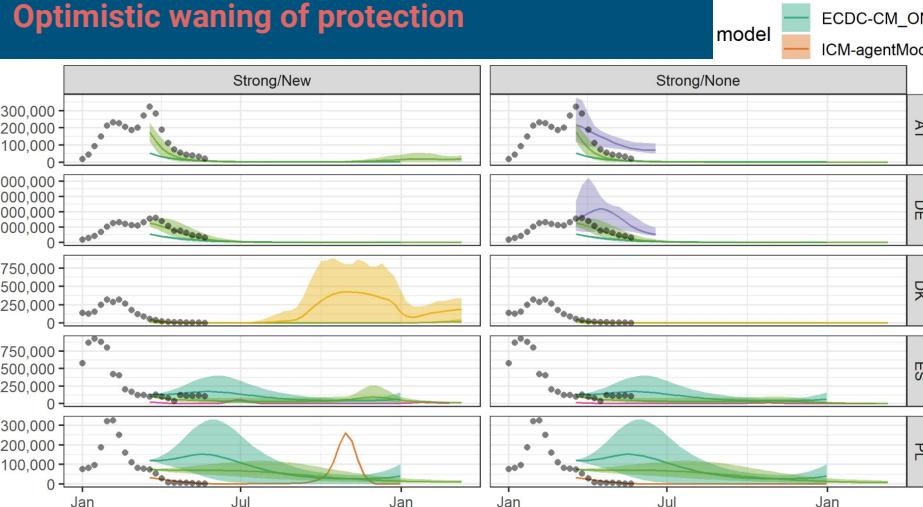

Immunity to infection

	Timing of a booster vaccination	
Optimistic waning of protection	Slow summer booster campaign	Fast autumn booster campaign
<ul style="list-style-type: none"><li>- 60% reduction in immunity against infection</li><li>- <b>8 months</b> median transition time to reduced protection</li></ul>	<ul style="list-style-type: none"><li>- 2nd booster recommended for 60+</li><li>- Uptake reaches 50% of 1st booster coverage by 15th December</li><li>- Uptake starts <b>15th June</b></li></ul>	<ul style="list-style-type: none"><li>- 2nd booster recommended for 60+</li><li>- Uptake reaches 50% of 1st booster coverage by 15th December</li><li>- Uptake starts <b>15th September</b></li></ul>
Pessimistic waning of protection	Scenario A	Scenario B
<ul style="list-style-type: none"><li>- 60% reduction in immunity against infection</li><li>- <b>3 months</b> median transition time to reduced protection</li></ul>	Scenario C	Scenario D

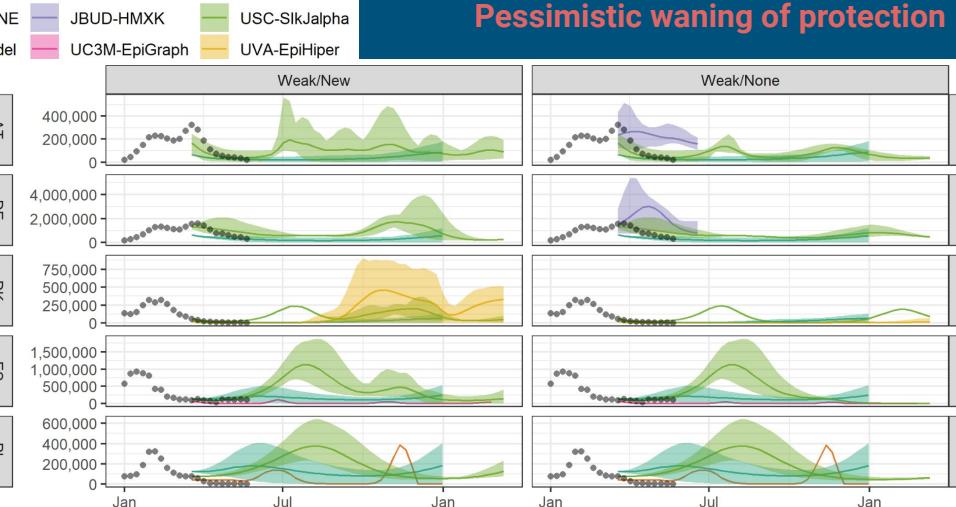

# Round 0: multi-model projections

- 20 independent teams joined calls and/or submitted models
- 8 teams started working on Round 0; 5 teams contributed results
- Five countries with >2 model projections

Optimistic waning of protection

Pessimistic waning of protection

# Round 0: challenges

---

## Issues with the Hub set up

- Few multi-country models
  - Limited team capacity
- Quantile format prevents deeper analysis
  - Unclear to what extent quantile submissions blur the frequency/magnitude of epidemic cycles among many model simulations
  - Cannot deduce cumulative counts, so can't estimate the overall impact of each scenario
  - Mitigation: submissions can now use samples

## Issues with interpretation

- Scenario specification and overlap
  - Waning protection: asymmetrical parameter values in terms of plausibility of optimistic and pessimistic scenarios
  - New variant: sensitivity to 30% immune escape?
- Technical challenge of immune waning parameters
  - For some models this meant re-estimating transmissibility between waning scenarios

# Round 0: conclusions

---

## Scientific interpretation

- Results consistent with the **speed of waning protection** against infection as a more significant factor in future outbreaks, compared to a new variant with some immune escape

## Policy relevance

- Greater consideration for the **timing of vaccination programmes** relative to waning protection, rather than as a response to new variant introductions

### Interpret with caution:

- Models intended as **experimental** for the pilot round, and we found substantial variation between models as well as between countries and scenarios
- Results may be biased by both submission constraints and scenario confounding
